

Evan Berg

Senior Software Engineer | Brooklyn, NY | (301) 641-7425 | evan.m.berg@gmail.com |
[LinkedIn/GitHub]

Profile Senior Software Engineer and technical leader with over a decade of experience designing, scaling, and maintaining high-throughput backend systems, primarily using Ruby on Rails. Proven track record of navigating complex organizational pivots, managing distributed teams, migrating legacy architectures to cloud-native platforms, and integrating cutting-edge LLM workflows. Versatile engineer who bridges deep backend expertise with product-focused frontend capabilities. (And a recovering musician).

Core Skills

- **Languages:** Ruby, Python, PHP, JavaScript, TypeScript, HTML/CSS
- **Frameworks & Libraries:** Ruby on Rails, Django, React, Vue.js, Hotwire, jQuery
- **Data & Storage:** PostgreSQL, MySQL, MariaDB, MongoDB, Redis, Elasticsearch
- **Architecture & Messaging:** Microservices, Sidekiq, Resque, RabbitMQ, IBM MQ, REST APIs
- **Cloud & Infrastructure:** AWS (ECS, RDS, S3, CDK), Azure, Kubernetes, Docker, Git/GitHub, Linux
- **AI & Tools:** Claude, LLM Agent Integration, Prompt Engineering

Professional Experience

TuneCore | Remote / Brooklyn, NY *Senior Software Engineer & Team Lead* | December 2025 – Present

- **Tech Stack:** Ruby on Rails, React, TypeScript, MariaDB, AWS (ECS, RDS, S3), Sidekiq, RSpec, Claude LLM
- **Engineering Leadership:** Appointed to spearhead and manage a cross-functional team of offshore contract engineers in India; streamlined cross-timezone communication, improved onboarding documentation, and boosted development velocity.
- **Feature Architecture:** Designed and executed a large-scale data querying and filtering system optimized for social media monetization, successfully integrating changes across the core monolith and multiple microservices.
- **AI Integration:** Led the internal initiative to integrate Claude into the engineering workflow as one of the first license holders; established, documented, and evangelized AI-assisted coding practices to increase team efficiency.
- **Change Management:** Maintained system stability and team morale during a complex corporate transition and engineering merger between TuneCore and Believe Music, actively mentoring junior engineers and mitigating attrition risks.

NCCER | Remote *Senior Software Engineer* | March 2024 – July 2025

- **Tech Stack:** Ruby on Rails, Hotwire, PostgreSQL, AWS (ECS, RDS, S3, CDK), Sidekiq, React, RSpec
- **Infrastructure Internalization:** Served as the second internal engineering hire tasked with transitioning technology ownership away from external vendors; successfully audited, absorbed, and secured multiple legacy vendor applications.
- **DevOps & Cloud Modernization:** Rewrote the company's AWS Cloud Development Kit (CDK) from scratch, simplifying the deployment pipeline and automating resource provisioning for S3 buckets and Sidekiq workers.
- **System Optimization:** Debugged a critical, months-long credentialing system defect by tracing deeply nested data pipelines to resolve a source-date mismatch; implemented extensive Salesforce API integrations to ensure real-time data synchronization.
- **Process Automation:** Built an automated document generation system using JSReports, allowing internal operators to batch-generate compliant PDF credentials for on-site construction workers.
- **Continuity & Scale:** Absorbed the responsibilities of two departing core engineers; managed the global Git workflow, code reviews, and architectural decisions while directly advising leadership on engineering hiring and vendor offboarding strategy.

Atlantis Technology | Remote *Senior Software Consultant (Client: BNY Mellon)* | July 2022 – August 2023

- **Tech Stack:** Ruby, MySQL, IBM Message Bus, RabbitMQ, Kubernetes, Microservices, Sidekiq, AWS
- **Enterprise Messaging:** Built microservices to ingest, process, and enrich high-volume financial data streams (JSON/XML) from distributed message buses for the Broker Cash project.
- **Data Architecture:** Provisioned and configured secure database clusters for isolated microservices, executing complex multi-repo migrations and routing data flows via automated Sidekiq workers.
- **Release Management:** Navigated and executed highly regulated deployment procedures across QA and staging environments under strict compliance frameworks.

Excella | Remote *Senior Software Consultant* | February 2022 – July 2022

- **Tech Stack:** Python, Django, PostgreSQL, HTML/JS, Azure, JumpCloud SSO
- **Full-Stack Development:** Engineered an internal HR and contractor resource tracking platform using Django, introducing custom database migrations and intuitive UI states to monitor resource allocation.
- **Identity & Compliance:** Implemented SAML and Single Sign-On (SSO) integrations via JumpCloud; acquired a **508 Accessibility Compliance Certification** to align federal and internal software with accessibility standards.

Casting Frontier | Remote / Los Angeles, CA *Team Lead / Principal Engineer* | April 2016 – January 2022

- **Tech Stack:** Ruby on Rails, MySQL, Vue.js, Elasticsearch, WebRTC, MongoDB, PHP, Resque, AWS
- **Executive Technical Leadership:** Promoted to the top technical role post-acquisition to act as Tech Lead/Principal Engineer, managing daily standups, architectural roadmaps, and cross-department collaboration with VPs.
- **Cloud Migration:** Spearheaded the migration of the entire legacy on-premise infrastructure to an AWS Kubernetes (EKS) containerized architecture, reducing hosting overhead and improving system availability.
- **Product Evolution:** Engineered critical platform capabilities including a Vue.js multi-step signup application, a real-time remote casting tool utilizing WebRTC, and a custom subscription billing engine handling auto-downgrades and promotional pricing.
- **Search Optimization:** Built a high-performance search infrastructure utilizing Elasticsearch, enabling casting directors to filter millions of actor records instantly.

Freelance Software Engineer | Remote | September 2015 – April 2016

- Developed bespoke web applications, CMS platforms, and static frontends using Ruby on Rails, React, and Vue.js for diverse commercial clients.

Tripwing | New York, NY *Software Engineer* | February 2015 – September 2015

- **Tech Stack:** Ruby on Rails, JavaScript, jQuery, Nokogiri, Resque, Heroku, RSpec
- **Core Optimization:** Boosted application performance by refactoring database queries via ActiveRecord, dramatically eliminating N+1 query bottlenecks.
- **Data Ingestion Engine:** Architected an email parsing engine that ingested luxury travel itineraries, used Nokogiri to extract data from structured XML payloads, and programmatically mapped it to customer profiles.

Education & Certifications

- **General Assembly** | Web Development Intensive Certification (2014)
- **Berklee College of Music** | Bachelor of Arts (2008)
- **Certification:** Section 508 Accessibility Compliance Certified
